Web Query Tool

About Web Query Tool

The Web Query Tool (Web QT) is designed to provide operational support by offering a simple and intuitive method for running queries against the eRA on-line transaction processing (OLTP) production database. Web QT will eventually replace eRA Oracle-forms based tools, such as Quickview, ICSTORe, and later, CRISP Plus. Web QT provides users with many key features including: ability to maintain queries and hitlist layouts, documentation output, exporting data to MS Excel, and a choice of system viewing options (basic or expanded view).
